

INTRODUCING EMSCHARTS SYNCPAD. SIMPLE AND INTUITIVE, THE IPAD CAN NOW BE YOUR TOOL OF CHOICE TO COLLECT MOBILE PATIENT DATA FOR YOUR EMSCHARTS SYSTEM.

The emsCharts SyncPad is an offline companion application for your emsCharts.com account. Collect patient data on an iPad or iPad mini and seamlessly upload the information to emsCharts for 100% paperless data documentation. Capture signatures and photos, which automatically attach to the patient record. An easy-to-use form interface allows emsCharts SyncPad to be deployed with virtually no training at all. Just download the app, login, and start charting!

FEATURES

- Paperless, offline patient data collection
- Electronic signature capture
- Seamless data upload mapped to corresponding fields in your emsCharts.com account
- PDF copy of the original form automatically attached to your online ePCR
- Customized layout(s) available

BENEFITS

- No data plan or WiFi connection necessary to operate in the field
- Cost savings on hardware, overtime, printing/faxing fees
- Easy deployment. Simple user interface requires very little crew training.
- Improved signature compliance

Go 100% Paperless

Automatically attach forms and photos to be viewed online by billers, hospital personnel, QA, and others.

Improve Compliance

Easily capture consent and refusal signatures in the field.

Save Time

Eliminate redundant data entry and reduce overtime.

Save Money

No need for expensive ruggedized hardware or data plans. Print charts in the field and save on faxing fees.

How **emsCharts** syncpad Works

Complete SyncPad form fields

Attach Photos

Capture Signatures

Upload to emsCharts.com

ADDITIONAL MODULES TO CONSIDER

EKG Import to the Web

Obtain vitals and events from the EKG monitor and import them directly into your patient record on emsCharts.com.

CAD Import

Pull dispatch data into the ePCR on emsCharts.com.

HL7 Import

Auto-populate hospital EMR fields and import Admit, Discharge, and Transfer (ADT) data back into the emsCharts ePCR. Requires that a custom interface to the hospital EMR system is already established.

emsCharts Hosted Faxing

Automatically fax a patient record to a designated recipient upon chart closure. Eliminates manual printing and faxing.

THE FORM

SyncPad, LLC - our collaborative partner for the SyncPad product - has developed the technology to re-create customer documentation forms on the iPad or iPad mini. Each form has a layout with specific boxes for EMS agencies to document their assessments and procedures. These boxes directly connect to the agency's emsCharts configuration, defaults, and medical industry standards.

All procedures and medications are mapped to allow a fast, easy way to document in the field without interrupting patient care. An unlimited number of forms - such as patient assessment, refusal, billing, or narcotic waste, for example - can be used on a single EMS incident.

THE INTERFACE

SyncPad, LLC has developed software to interpret and translate EMS documentation from the iPad device into data. This data is then uploaded to emsCharts.com where it is translated and directly imported into the corresponding fields of the emsCharts patient record.

COST

Contact your emsCharts Sales Representative for pricing.

SYSTEM REQUIREMENTS

Operating System: iPad iOS 6
Requires a subscription to emsCharts
